

Tanshi's 6-Month Sprint — How everything is calculated

A plain-English reference for every rule and formula the tracker currently uses.

Last updated: 27 Jun 2026.

1. The two headline numbers

Overall Today — how today went, scored out of 100, as a weighted mix of the 6 categories:

Category	Weight
Study	40%
Diet	20%
Gym	20%
Wake Up	10%
Office	5%
Vitamins	5%

- On an **off day** (Sunday, or 1st/3rd/5th Saturday), Office is excluded and the other weights re-balance so you're not penalised.
- **Week avg** shown under the ring = the same weighted score averaged across the current week.

CAT Readiness — exam-focused score, separate from daily habits:

QA 40% + DILR 25% + RC/VARC 15% + Aeon/VARC-activity 10% + Wake-up consistency 10%

2. Study (40% of the day)

Study is itself split:

- **QA = 50%** of study
- **DILR = 30%** of study
- **VARC block = 20%** of study, where the VARC block = average of (**VARC exercise + Vocab session + 20-min Reading**), each counted yes/no. (*This is why logging Vocab or Reading moves your Overall score.*)

Today's study credit:

- **QA:** today's questions ÷ today's required pace (capped at 100). If pace can't be computed, any QA logged = 100.
- **DILR:** any DILR logged today = 100.
- **VARC block:** each of VARC / Vocab / Reading is 100 if done, then averaged.

QA pacing (the important one)

- **Aim: 25 questions/day. Hard cap: 30/day** — the daily target is never higher than 30, no matter how much backlog builds up.
- Formula: `clamp(remaining ÷ days-left, 25, 30)`, never more than what's actually left.
- If you fall behind, the **finish date slides later** instead of the daily load spiking. ("Add a day to divide the load.")
- All QA is paced evenly to **31 August 2026** (the old June/July split was removed).
- **Per-topic breakdown:** the daily target is split across topics in order, capped at what's left in each — e.g. "Profit & Loss 7 + Simple Interest 18 = 25". A topic turns green when its share is done.
- **Skip / defer:** on the Study tab, "Skip" sets aside N questions of a chapter (they leave the daily plan but stay on record as "N deferred"); "Restore" brings them back.

DILR (LR + DI) — one rotating topic per day

- Each day picks **one LR topic and one DI topic**, weighted so topics with **more questions remaining come up more often**. The pick is deterministic per day (stable for tap/undo).
- 1 set = 4 questions**. LR target ≈ 2 sets/day (8 Qs), DI ≈ 1 set/day (4 Qs), paced toward 31 Aug.

VARC — one rotating topic per day

- One VARC topic picked daily (same weighted rotation), target ≈ 2 exercises.

Vocab

- Word Power Made Easy*, 1 session/day target (47 sessions total).

Reading

- 20 min/day habit; weekly reading score = days with ≥ 20 min $\div 7$.

Logging multiples

- Every study tile has a – **[count]** + stepper. + adds one unit (LR/DI step by a full set = 4 Qs; QA/VARC/Vocab by 1). You can also type a number directly.

3. Diet (20%)

- Targets: 1200 kcal, 90g protein** (editable).
- Daily diet score = average of a calorie score and a protein score:

Protein/day	Score		Calories/day	Score
≥ 90 g	100		≤ 1300	100
≥ 80 g	90		≤ 1400	90
≥ 70 g	75		≤ 1500	75
≥ 60 g	50		≤ 1700	50
below	25		above	25

- A day with **no food logged is skipped** (not scored 0) in the weekly average.
- Food database:** built-in Indian + gym + café foods, with a natural-language parser ("2 eggs", "rice and rajma"). Type a quantity and macros are auto-calculated.
- Custom foods:** if a food isn't found, the search shows "+ Add '<name>' yourself" → enter calories/protein → it logs *and* saves to your personal list for next time. There's also an "or enter your own" row for manual entry.

4. Gym (20%)

- Goal: **4 classes/week** (prorated to days available since plan start).
- A gym class = full credit; a 10,000-step day = 25% credit** ($\frac{1}{4}$ of a class). A day with a class counts once.
- Weekly gym score = (classes + step-days) $\div$ weekly target.
- Class type (Legs, Arms & Chest, etc.) and calories burned are logged for record.

5. Wake Up (10%) — scored by time

The wake score depends on **when** you woke up (logged time), scaled to the 10% category:

Wake time	Points
before 5:30	10
5:30 – 6:00	9
6:00 – 6:30	8
6:30 – 7:00	7
7:00 – 8:00	5
8:00 – 9:00	2
after 9:00	0

- **Missed = 0.** "Woke up" with **no time logged = full credit (10).**
- Weekly wake score = average of daily wake points across the week.

6. Office (5%)

- **Working days** = all weekdays + 2nd/4th/5th Saturdays. **Off** = Sundays and 1st/3rd Saturdays.
- Score = days attended (Office or WFH) ÷ expected working days in the month (counted from plan start).
- **WFH cap: 2/month** (flagged red if exceeded).
- Off days are not expected and don't count against you.

7. Vitamins (5%)

- **Iron + B12 daily, Vitamin D once a week.**
- Weekly doses required = (2 × days available) + 1. Score = doses taken ÷ required.
- **Vitamin D** row hides once taken that week (shows only when due, or the day you took it).
- **Amla shot** is a yes/no log only — it does **not** affect the vitamin score.

8. Plan & calendar rules

- **Plan starts 15 June 2026.** Earlier dates are dropped; the calendar floors here but moves forward freely.
- Weekly/monthly targets are **prorated** — days before the plan start (or before today, this week) don't inflate the denominator.
- Deadlines: **QA** → **31 Aug**, DILR & VARC → 31 Aug, Vocab → 3 Aug. CAT exam: **29 Nov 2026**.
- Already-done QA chapters at start: Averages, Percentages, Ratio-Proportion-Variation, Alligations.

9. The coach (Bun) 🐰

- Bun's message is **time-aware**: a low score in the **morning** is encouraging ("off to a good start"), afternoons are upbeat, evenings give a gentle nudge — only genuinely missed *past* days get a soft note. Strong scores celebrate any time.
- **Confetti** fires when you complete a study target (by tap or by hitting the count).

10. Data & safety

- **All data lives in your browser** (localStorage) — nothing is on GitHub (GitHub only hosts the app code). Data is tied to the website address.

- **Backups (3 layers):** a linked on-disk file (Chrome/Edge), rolling 7-day snapshots, and an auto-exported dated JSON to Downloads every ~3 days (rides your first tap, so Safari doesn't block it).
- **Export / Import** anytime from the header. Importing replaces current data with the file's.
- **Reset** requires typing DELETE and auto-downloads a backup first.
- The app loads fresh on every update (cache-busting), so new features appear without manual refresh.

11. 🎮 Game Mode

A play layer on top of the same scores — nothing about the categories above changes.

Daily Quest

- **Goal = match OR beat yesterday's %.** That's the whole game; the bar self-hardens as your baseline rises.
- **50% floor:** a day must reach **50%** to bank *any* reward. Below that you can still beat yesterday, but you earn ₹0.
- A "win" = today $\geq 50\%$ **and** $\geq$ yesterday.

Reward Wallet (credit ledger)

The wallet is a **credit balance** — not real money — banked automatically from your history and spent freely. **Balance = total earned – total spent**, recomputed from your logs. **The balance can go negative** ("in the red — earn it back"); spending is never blocked by a low balance (only by a deep-slump freeze, below).

Earning (only on days that clear 50%):

Source	₹
Beat/match yesterday	+100/day
80%+ day	+50
100% day (Mystery Chest)	+200
Each combo	+25
Streak milestones (3 / 5 / 10 / 20 days)	+150 / +200 / +500 / +1000
Weekly quest hit (diet/study/gym/wake)	+200 / +300 / +250 / +150
Good month ($\geq 70\%$ winning days)	+1000

Spending — two kinds

- 📄 **Free perks** (unlocked just by clearing the day, no credits, once each per win): ☕ Coffee outside · 🍰 Sweet treat · 🍜 Momos/a craving · 😴 Sleep in extra.
- 🛒 **Credit spending** (free-form): enter the **actual ₹ amount** of any treat + what it was for (quick chips: Shopping · Restaurant · Spa · Outing · Other). It debits your credits by that exact amount — e.g. ₹2000 shopping → –₹2000 — and the balance can dip negative.
- Every spend/perk is logged in 📄 **Redeemed offers** with date + amount, each with an undo × (refunds).
- The wallet has a **dated Statement** ("₹X earned, ₹Y spent") that itemises every reward with its date and reason (e.g. "Beat/matched yesterday — 58% · 30 Jun · +₹100").

Streaks

Consecutive winning days. Milestones at 3/5/10/20 pay out (see table). Break a streak and it resets — the wallet stays.

Combos (auto-detected, +₹25 each)

- 🏋️ **Fitness** = Gym + Diet (diet 80%+)
- 📖 **Scholar** = Study + Reading (20 min)
- 🌅 **Morning Warrior** = Wake-up + Gym

Weekly Quests

Per week: Diet 5 days · Study 6 days · Gym 4 classes · Wake 6 mornings — each hit banks ₹ and shows a progress bar.

🏆 Monthly Milestone

Hit **≥70% winning days in a calendar month** → unlock a **Night Out** (claimable once/month, free) + **₹1000** banked. The 70% bar adapts to how many days the month actually has (so a part-month is fair).

🧠 Strategic Skip

Skip one category/day **if you compensate** — the skipped category then drops out of that day's quest scoring (weights re-balance):

- Skip **Gym** → Diet 90+ · OR +20 QA · OR 2 DILR sets
- Skip **Diet** → Gym class · OR 10k steps
- Skip **Study** → Gym done AND Diet 90+

🛖 No Zero Days

A backup ladder per category (e.g. Gym → 10k steps → 30-min walk → 15-min stretch) so there's always an easiest available win.

Punishments (gentle, not miserable)

- A **<40% yesterday** locks the ☕ coffee perk today.
- **Defaulting too long** (a run of empty/<40% days) **drains the wallet**, escalating each day, and at **3+ days FREEZES all redemptions**. Log one **50%+ day** and it thaws and the balance is restored. Only the *current* slump bites — old gaps you recovered from don't.

Level

A cosmetic level grows with lifetime earnings (every ₹1000 ≈ +1 level).

This document describes the logic as configured on 30 Jun 2026, including Game Mode. If any rule changes, ask and I'll update this file.
